*Minor changes may be made during continued program development (Course clinical hours are shown in parenthesis – 60 clock hours equals 1 credit)
NP Track Notes:
The last two years of the DNP program in particular will require a great deal of time and commitment from students in order to successfully complete increased credits of coursework, including clinical and in class work. This effort must also include preparation for both clinical and classroom assignments.

It will be necessary to limit employment such that this schedule can be met. It has been our experience that the students who have struggled with success in the NP program have overextended themselves with work hours and needed to further reduce their hours in order to successfully achieve program requirements.

Classes the third year on Thursday will cover morning, early afternoon, and sometimes late afternoon hours. Clinical hours will require approximately 16 hours a week for each semester in addition to class time; using a 15 week semester; this translates into at least 2 – 2 1/2 days a week for clinical, not counting Thursday when there is class and seminar; some of the class work will be conducted online, but the majority is on campus.

Classes the fourth year will be on occasional Saturday mornings. Clinical and DNP project hours will vary from week to week. For BSN to DNP students, at least ½ of the clinical hours must be spent in direct care. The remaining hours can be used for project completion and additional placements depending on individual learning needs.
